

October 2 2006

**AGM** (American Global Manufacturing) recently introduced their new water truck solution at the Caterpillar International Used Equipment Managers Conference in Las Vegas, NV.

John Stracener, an independent trucker who contracts to deliver AGM Water Tanks throughout the western USA, found the Kenworth T800 with the new Caterpillar CX31 automatic transmission a pleasure to drive through the crowded streets in downtown Las Vegas, NV. This stylized product was a big hit with the crowds of visitors at Caesars Palace Casino Resort.

Featured above is the Kenworth T800 truck with the “new breed” Caterpillar C13 diesel engine and the new Caterpillar CX31 automatic transmission. The Special Application AGM C15LSA (15000 liter/4000 gallon) water tank is fitted on the Kenworth T800. AGM will be able to supply water tanks up to 5550 gallon capacity with this truck model.

**AGM** would like to thank Caterpillar and the Caterpillar Dealers for their continued interest and support.

This new product will be available to Caterpillar Dealers in early 2007.
